

# DANYAL TANVEER

donibutt2112@gmail.com | +92 370 7076164 | Lahore, Punjab | linkedin.com/in/danyal-tanveer-30b887320 | github.com/Danyal-0276

## PROFESSIONAL SUMMARY

Computer Science graduate (BS, University of Central Punjab, CGPA 3.60/4.00) with a strong foundation in object-oriented programming, data structures, algorithms, and database systems. Proficient in Python, Java, JavaScript/TypeScript, and C/C++. Proven ability to learn new tools quickly, demonstrated by shipping production software for real-world clients across full-stack web, mobile, and applied AI/ML projects. Strong communicator and collaborative team player, eager to grow within a fast-paced engineering team.

## TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C, C++, SQL, HTML/CSS

Programming Foundations: OOP (classes, inheritance, encapsulation, polymorphism), Data Structures (arrays, linked lists, stacks, queues, trees), Algorithms, Problem Solving

Frameworks and Libraries: React, React Native, Next.js, Django, DRF, Node.js, Express, FastAPI

Databases: MongoDB, MySQL, PostgreSQL, SQLite, Firebase Realtime Database

Tools and Practices: Git/GitHub, CI/CD, Postman, Swagger/OpenAPI, Agile/Scrum, JWT Auth, REST API Design, Unit Testing

## EDUCATION

**Bachelor of Science in Computer Science, University of Central Punjab (UCP), Lahore**

Sep 2022 - Jul 2026

CGPA: 3.60 / 4.00 | Coursework: OOP, Data Structures and Algorithms, Database Systems, Software Engineering, Operating Systems, Computer Networks, Machine Learning

## WORK EXPERIENCE

**Full-Stack Developer Intern, Tri Tech Technology LLC**

Jul 2025 - Dec 2025

On-site | Lahore, Pakistan

- Built a 4-service multi-tenant restaurant POS SaaS ecosystem (Node.js/Express API plus three Next.js/TypeScript frontends for Platform Admin, Restaurant Console, and Cashier Terminal) sharing one MongoDB-backed REST API
- Applied OOP and clean architecture principles to design multi-tenant data isolation, JWT authentication across platform, tenant, and PIN login flows, and role-based middleware for five user roles
- Built RESTful APIs with Mongoose/MongoDB, Swagger/OpenAPI documentation, and Redis caching; implemented order lifecycle, inventory, and analytics modules
- Deployed the system to production for live restaurant clients (CAP Cafe and Extraction) using PM2, following Agile practices and collaborating closely with a small engineering team

## PROJECTS

**TRAK: AI-Powered News Credibility Platform**

Jan 2026 - Present

React Native, Django, MongoDB, HuggingFace Transformers

- Architected a full-stack mobile application (React Native frontend, Django/DRF backend, MongoDB storage) applying OOP design patterns throughout the codebase
- Fine-tuned RoBERTa and DeBERTa transformer models on 220K+ labeled samples for real/fake/suspicious credibility classification
- Built an end-to-end pipeline covering news scraping, NLP preprocessing, classification, and personalized feed delivery, with JWT auth and role-based access control

**POS Ecosystem: Multi-Tenant Restaurant SaaS**

Jul 2025 - Dec 2025

Next.js, React, TypeScript, Node.js, Express, MongoDB, Redis, Swagger

- Built a 4-app ecosystem (Express/MongoDB API plus three Next.js/TypeScript frontends) sharing one multi-tenant REST contract, using a reusable crudFactory for tenant-scoped CRUD
- Implemented JWT auth across three role tiers and delivered end-to-end restaurant operations including table/order lifecycle, menu modifiers, payments, and staff management

**Throne of Glass Archive: RAG Chatbot**

2026

Python, FastAPI, PostgreSQL/pgvector, Next.js, Groq LLM API

- Built a retrieval-augmented generation chatbot from scratch (no LangChain), implementing PDF chunking, embeddings, PostgreSQL + pgvector similarity search, and streaming generation
- Designed a spoiler-safe retrieval filter and debugged production issues including environment-loading bugs and API token-limit throttling

**Feastly: Multi-Role Food Delivery Marketplace**

2026

Next.js, TypeScript, Django, DRF, MongoDB, JWT, Stripe

- Built a four-sided delivery marketplace (customer, restaurant owner, rider, admin) with a Next.js/TypeScript frontend and a Django REST Framework backend on MongoDB
- Designed an actor-gated order state machine enforcing role-based status transitions across 9 order states, and integrated Stripe Checkout with webhooks plus cash-on-delivery

## CERTIFICATIONS

AI Fundamentals - Google (via Coursera), Apr 2026 | Fundamentals of Agents - HuggingFace AI Agents Course, May 2026 | Python (Basic) - HackerRank, Aug 2026
